Executive Summary

CCIG has completed a comprehensive review of Schneider Building Company's current insurance program, contract risk transfer approach, and overall risk profile as a general contractor and framing subcontractor operating in Colorado's residential and multifamily construction market.

Overall Assessment

The current program reflects a well-built foundation for a contractor of this size, anchored by strong project-specific GL towers (including \$11M in stacked limits on the Wheat Ridge project), occurrence-based pollution coverage through Westchester, and an excellent 0.74 experience modification factor backed by a clean loss history. The carrier roster is appropriate for the risk, blending strong admitted markets (Selective, Pinnacol) with experienced construction-focused surplus lines carriers for harder-to-place exposures.

However, several structural gaps and misalignments currently expose the company to uninsured or under-insured risk:

- No Employment Practices Liability coverage exists anywhere in the program. This is the single largest void, particularly given the size of the workforce and the frequency of EPL claims in construction.
- Cyber liability is functionally placeholder coverage at \$50,000 in aggregate limits, with cyber excluded on every GL and excess policy in the program.
- Excess auto is misaligned with the primary policy, excluding hired and non-owned autos and subcontractor operations, leaving a meaningful gap above the \$1M primary layer.
- Named insured inconsistencies across related entities create potential claim denial risk if those entities are active and incur liability.

Priority Recommendations

CCIG recommends a phased approach: bind EPLI, restructure the excess auto program, and increase cyber limits within 30 days; harmonize named insureds and add workers' compensation coverage for other states within 60 days; and address secondary items further in our analysis such as D&O, practice professional liability, and wildfire exclusion negotiation at the next renewal.

Sincerely,

Cody Knepper

Insurance Advisor

CCIG Information & Expertise

About CCIG

CCIG IS A FULL-SERVICE COMMERCIAL LINES, SURETY, EMPLOYEE BENEFITS, AND PRIVATE CLIENT INSURANCE BROKERAGE

Since 1985, CCIG has been a fiercely independent, rapidly growing insurance brokerage, delivering comprehensive risk management and insurance solutions to our diverse clientele. With a national presence, we employ over 115 seasoned insurance professionals and operate from our offices in Denver, CO, Austin, TX, and Phoenix, AZ.

Visibility & Influence in the Industry

CCIG's foundation rests on the belief that exceptional companies are built by exceptional people. Over our 40-year journey, we've attracted and retained industry leaders dedicated to delivering personalized, forward-thinking insurance solutions. Through strategic investments, we've expanded our reach to bring the resources and global market access of leading brokerages to the Texas, Colorado, and Arizona marketplaces.

The Independent Insurance Agents and Brokers of America has repeatedly honored CCIG as the "Best Practices" Insurance Broker. Insurance Journal ranked CCIG as a Top 100 Agency in 2025. We've been recognized as a Top Workplace by The Denver Post nine times since 2015.

Expertise

CCIG's construction practice works with general contractors, framing subcontractors, and residential/multifamily builders across the full lifecycle of a project and a company's growth. The practice is built around the specific risk issues that distinguish construction accounts from general commercial business:

- **Project-specific insurance structuring** — building stacked GL towers, coordinating primary/excess layers, and structuring builders risk and completed operations coverage tailored to individual projects rather than relying solely on a practice policy.
- **Construction defect exposure** — deep familiarity with Colorado's construction defect litigation environment, including the coverage implications of statute-of-repose extensions, completed operations tails, and professional liability crossover claims common in residential and multifamily work.
- **Subcontractor risk transfer** — reviewing subcontract and owner contract insurance provisions (indemnity, additional insured status, waiver of subrogation, primary/noncontributory wording) and aligning those contractual requirements with the client's actual coverage program.
- **Carrier access and market strategy** — relationships across both admitted markets for core package and workers' compensation lines and the surplus lines/specialty markets that actively write framing, multifamily, and general contractor risk, particularly for excess towers and environmental/pollution coverage.
- **Data-driven program benchmarking** — using experience modification trend analysis, loss run review, and peer benchmarking to evaluate whether a program is structured and priced appropriately for the client's actual risk profile as it grows.
- **Claims advocacy and safety consulting** — dedicated claims advocates managing files from first notice through resolution, paired with safety leadership support for loss control, training, and pre-renewal risk positioning.
- **Growth-stage support** — experience helping contractors evaluate program structure as they expand into new project types, geographies, and higher-risk environments such as municipal work.

Coverage & Risk Assessment

Overall Program Rating: B-

Schneider Building Company's current program reflects sound underlying structure for a mid-size residential and commercial general contractor. The project specific towers on Wheat Ridge and Ledge Rock, a favorable 0.74 experience modification factor, and occurrence-based pollution coverage all point to a program that has been thoughtfully assembled. That said, several structural misalignments and coverage gaps are limiting the program's overall strength, and until addressed, they leave the company carrying material uninsured exposure. The good news: every issue identified below is correctable.

Program Strengths

1. Well-Built Project-Specific GL Towers

The Wheat Ridge tower is properly stacked, with Accelerant providing \$2,000,000/\$2,000,000 in primary limits, Dellwood adding \$5,000,000 in excess, and Ascot layering on another \$4,000,000, for \$11M in total project-specific GL limits. The underlying schedules align correctly between layers, and the policy includes a 10-year completed operations extension (or statute of repose, whichever is less), which is essential protection given Colorado's construction defect exposure.

2. Occurrence-Based Pollution Coverage

The Westchester pollution policy is written on an occurrence basis rather than claims-made, which removes tail and retroactive date complications down the road. Limits of \$1,000,000/\$2,000,000 are appropriate for a contractor of this size, and the policy extends to transportation pollution, non-owned disposal sites, and mold.

3. Favorable Loss History and Experience Modification

An experience mod of 0.74, paired with zero claims across the full experience period on the Pinnacol loss runs, reflects strong operational discipline and positions the company well heading into future renewals.

4. Strong Extensions on the Ledge Rock Policy

The Ledge Rock pollution and professional policy includes a 96-month completed operations extension and a purchased extended reporting period through 2035, providing meaningful long-tail protection for a project involving design or construction management services.

5. Solid Subcontractor Risk Transfer

Both the practice GL and the Wheat Ridge GL require subcontractors to carry \$1M/\$2M/\$2M in GL limits with additional insured and primary/noncontributory status. Noncompliance triggers a deductible increase, from \$5,000 up to \$10,000 on the practice GL and up to \$50,000 on Wheat Ridge, which gives subcontractors a real financial incentive to stay compliant. This is a well-structured approach to risk transfer.

Program Weaknesses

1. Missing Lines of Coverage

Several important lines are absent from the program entirely:

Missing Line	Severity
Employment Practices Liability	Critical — excluded on every GL and excess policy, with no standalone coverage in place
Directors & Officers Liability	High — no management liability policy identified
Practice Professional Liability	Medium — professional liability exists only for the Ledge Rock project

2. Cyber Coverage Is Nominal, Not Functional

The current cyber coverage carries a \$50,000 aggregate limit with sublimits as low as \$5,000 for fraudulent instruction and electronic crime, amounts that would not meaningfully respond to even a minor incident. Compounding this, cyber is excluded outright on every GL and excess policy in the program, creating a near-total void across the entire structure.

3. Excess Auto Misaligned with Primary Auto

The Auto Excess excludes hired and non-owned autos, subcontractor operations, pollution, and assault/battery, and schedules only nine vehicles against the primary's ten. The primary policy provides broad "Any Auto" coverage at \$1M, but the excess is far more restrictive, meaning exposures that trigger the primary often have no excess protection behind them.

4. Named Insured Fragmentation

Three entities appear across the program's policies, but only one is named consistently on every line of coverage. The remaining entities carry property and auto coverage but have no GL, excess, pollution, or workers' compensation coverage. If these are active, separate legal entities, this creates real exposure to claim denial.

Endorsements and Terms Worth Highlighting

Most Impactful Restrictions

The practice GL carries a new residential construction exclusion, which reshapes the policy significantly for a builder in this space, effectively limiting it to commercial-only operations and requiring a separate project-specific GL to be bound before any new residential work begins.

A wildfire exclusion appears on both the practice GL and the excess GL, a notable gap for a Colorado contractor given the wildfire risk associated with hot work, equipment operation, and material storage on active job sites.

Silica is excluded from every GL and excess policy, leaving uninsured exposure for a framing and construction operation that regularly cuts concrete and masonry.

The hired and non-owned auto exclusion on the excess auto policy remains the program's most significant structural misalignment, as noted above.

Favorable Terms Worth Preserving

The practice GL includes a blanket waiver of subrogation when required by written contract, an essential provision for a general contractor that regularly signs subcontracts and owner agreements requiring this language.

The package policy includes an enhancement package that adds valuable sublimits for tools, personal effects, debris removal, lock replacement, and an extended 180-day period of restoration for business income, solid value at the package level.

The purchased extended reporting period on the Ledge Rock pollution and professional policy, running through 2035, reflects thoughtful, forward-looking placement for long-tail construction professional liability exposure.

Key Metrics Summary

Metric	Value	Assessment
Total GL limits (practice)	\$6M (\$1M primary + \$5M excess)	Adequate, but restricted by the residential exclusion
Total GL limits (Wheat Ridge)	\$11M (\$2M + \$5M + \$4M)	Strong
Auto CSL	\$1M primary + \$1M excess	Adequate for owned autos; no excess protection for hired and non-owned
Workers' Comp EL	\$1M/\$1M/\$1M	Standard
Cyber	\$50,000	Critically inadequate
Pollution	\$1M/\$2M occurrence	Well-structured
Crime	\$25,000 employee theft / \$10,000 funds transfer	Low
Experience Mod	0.74	Excellent
Lines missing entirely	EPLI, D&O, Practice PL	Material gaps

Bottom Line

The program's core strength lies in its project-specific GL towers and pollution coverage, both of which are well-structured and appropriately matched to the company's construction operations. Its weaknesses, by contrast, are the ones that cut across the entire program: the absence of EPLI, named insured fragmentation between entities, a misaligned Excess Auto over the auto policy, and cyber limits that offer little real protection.

The residential construction exclusion on the practice GL is the defining structural feature of this program, and it makes disciplined process essential going forward: every new residential project needs a project-specific GL bound before work begins, with no exceptions. Addressing the three highest-priority items first, adding EPLI, restructuring the excess auto over the auto to align with the primary, and increasing cyber limits to at least \$1M, would meaningfully strengthen the program and close the most material gaps in coverage.

Over-Insured, Under-Insured & Misstructured Coverage Analysis

Potentially Over-Insured Areas

Excess GL/EL Tower Relative to Practice GL Restrictions

The excess GL/EL policy provides \$5,000,000 over the practice GL's \$1M/\$2M limits. However, the underlying practice GL excludes new residential construction, height work above 50 feet, and out-of-state operations. Because a meaningful share of the practice's actual operations falls outside what the underlying policy covers, the excess layer sits on top of a more restricted primary than the limit alone suggests. We'd recommend evaluating whether the current \$5M excess limit is properly sized against the operations that genuinely qualify for coverage.

Potential Overlap in Pollution Coverage

Three separate pollution policies currently sit across the program: a practice-level policy, a Ledge Rock project-specific policy, and pollution exclusions on the Wheat Ridge GL that the Ledge Rock policy was likely purchased to address. There may be overlapping coverage for pollution events occurring at the Ledge Rock site. We'd recommend confirming whether the practice policy's territory or project endorsements create redundancy with the project-specific placement, or whether the second policy was purchased specifically to fill a gap the first one left open.

Under-Insured Areas

Cyber Liability

At \$50,000 in aggregate limits with sublimits as low as \$5,000, this coverage would not meaningfully respond to a real event. For a contractor of this size processing digital payments and managing employee data, a single wire fraud incident or ransomware event would exhaust these limits instantly. Industry benchmarks for a contractor this size point to \$1M as a reasonable minimum.

Property Coverage at Location 1

Building and personal property coverage at the primary location should be checked against an updated inventory. With an 80% coinsurance requirement, values exceeding the current limit by roughly 25% would trigger a coinsurance penalty at time of loss.

Contractors Equipment

Coverage currently exists only for leased or rented equipment; owned equipment appears to have no scheduled inland marine coverage. If the company owns generators, compressors, scaffolding, or other equipment beyond the modest tools sublimit in the package policy, this is a real gap rather than a non-issue.

Crime Coverage

Employee theft and funds transfer fraud limits are both low relative to the size of the projects the company manages. Construction-specific theft schemes, including vendor payment diversion and payroll fraud, routinely exceed these thresholds.

Workers' Compensation: No Other States Coverage

The policy currently shows no other states coverage. Any employee traveling outside Colorado, even briefly for material pickups or site visits, would be uninsured for workers' compensation purposes.

Misstructured Areas

Excess Auto Does Not Align with Primary Auto

This is the most significant structural mismatch in the program. The primary auto policy covers any auto, including hired and non-owned vehicles, at \$1M. The excess policy is considerably more restrictive: it excludes hired and non-owned autos and subcontractor operations, and schedules one fewer vehicle than the primary. The result is that a meaningful share of the company's actual auto exposure, particularly employees driving personal vehicles to job sites, has primary coverage but no excess protection above it.

Named Insured Inconsistency

Related entities are named on the property and auto package but not on the GL, excess, pollution, or workers' compensation policies. If these entities are active and conducting operations, a liability claim against them would likely be denied for lack of named insured status. This kind of inconsistency typically signals a program that was built incrementally over time without coordinating named insureds across every policy.

Policy Period Misalignment

The workers' compensation policy period is offset by roughly ten days from the GL and excess policies. Because excess coverage generally requires the underlying policy to be in full force, this creates a brief window each year where a claim could face a coverage dispute due to the date gap.

Business Income Reporting

Business income coverage is written on an actual loss sustained basis, which is favorable, but coinsurance still applies. We'd recommend confirming that reported values align with projected 12-month operations to avoid a coinsurance penalty in the event of a claim.

Practice GL vs. Project GL Structural Split

The GL program is split between a practice policy and project-specific policies for individual jobs. This is a common structure for residential builders, but it creates a timing risk: any work performed between projects, including pre-construction services or general estimating, falls solely on the practice policy, which excludes new residential construction. If a new residential project begins before its project-specific policy is bound, a coverage gap opens.

Priority Summary

Finding	Category	Priority
Excess auto misaligned with primary Auto	Misstructured	Critical
Named insured inconsistency	Misstructured	Critical
Cyber limits at \$50,000	Under-insured	Critical
No EPLI in the program	Under-insured	High
No other states workers' comp coverage	Under-insured	High
Policy period offset (WC vs. GL/excess)	Misstructured	Medium
Practice GL residential exclusion vs. excess premium	Over-insured (potentially)	Medium
Crime limits	Under-insured	Medium
Owned contractors' equipment not scheduled	Under-insured (if applicable)	Medium
Property coinsurance adequacy	Under-insured (potentially)	Low

Are the Current Carriers Appropriate for the Operations and Risk Profile?

Overall Conclusion

The carrier roster is largely well-suited to a specialty contractor risk of this type. The program appropriately blends admitted markets for the core package and workers' compensation lines with experienced construction-focused surplus lines carriers for the harder-to-place exposures, including excess liability, environmental, and professional coverage. The considerations worth flagging are not about carrier quality, but rather about the number of surplus lines placements involved and the coordination required across that many carriers.

Carrier-by-Carrier Assessment

Core Package and Practice Lines

The package carrier is a well-established, admitted regional insurer with a strong middle-market contractor focus. Admitted status means guaranty fund protection and regulatory oversight of rates and forms, and the enhancement package included reflects a genuinely contractor-oriented product. This is a good fit for the package lines, with the one caveat being that the cyber component bundled into this package is nominal, which is a product limitation rather than a reflection of the carrier itself.

CCIG's preference would be to always place insureds with an admitted standard market before going to surplus lines.

The practice GL and excess GL/EL carrier is part of a highly rated specialty insurance group with deep construction expertise, a strong choice for contractor general liability. The concern here isn't carrier suitability but form restrictiveness: the residential construction exclusion, along with the wildfire and height exclusions, reflects a cautious underwriting appetite. This is an appropriate surplus lines placement for a contractor with this risk profile, but it's worth confirming the carrier's appetite still matches current operations.

The workers' compensation carrier is Colorado's largest WC insurer and the state's designated market of last resort, offering unmatched Colorado-specific expertise, claims handling, and safety resources. This is an ideal fit for a Colorado-domiciled contractor, and the favorable experience MOD and clean loss history reflect well on that relationship. The one caveat is that this carrier writes Colorado exposure only, so any out-of-state work would require a separate carrier or endorsement.

Excess Liability Towers

The Wheat Ridge project tower relies on surplus lines specialty carriers that are commonly used for construction project excess towers, a standard and appropriate approach since admitted markets rarely offer this kind of capacity for residential construction defect exposure. Because surplus lines carriers aren't backed by the Colorado guaranty fund, it's worth verifying current financial strength ratings for the smaller specialty markets at each renewal.

Keeping the practice excess GL/EL with the same carrier as the underlying practice GL simplifies follow-form alignment and reduces the risk of gaps between layers, a smart structural choice.

The excess auto carrier is financially excellent, but the specific form is a poor match for the company's operations. The hired and non-owned exclusion and the subcontractor exclusion leave key exposures uncovered. This is a form and appetite mismatch rather than a carrier strength issue, and it's worth remarketing to a carrier willing to match the primary's broader coverage grant.

Environmental and Professional

The pollution liability carrier is a market leader in environmental and contractor pollution coverage, and the occurrence-based form secured here is a premium feature that many environmental carriers don't offer. This is an excellent carrier choice for this line.

The Ledge Rock pollution and professional carrier is an active market in combined pollution and professional forms for individual projects, and the purchased extended reporting period through 2035 shows this placement was structured thoughtfully.

Cross-Cutting Observations

Consideration	Assessment
Financial strength	Core carriers are all financially strong; smaller specialty excess markets warrant rating verification at each renewal
Admitted vs. surplus lines	The program relies heavily on surplus lines, which is appropriate and expected for residential construction defect risk, since admitted markets have largely exited this class, CCIG's preference would be to always place insureds with an admitted standard market before going to surplus lines
Construction expertise	Every carrier has relevant construction or specialty experience; none are writing outside their appetite
Carrier count	Ten policies across nine carriers creates coordination complexity, including mismatched policy periods and named insured inconsistencies, though this is a manageable trade-off for specialized coverage
Colorado fit	The workers' comp carrier and the surplus lines construction markets are well matched to Colorado's construction defect and wildfire environment

Bottom Line

The carriers in this program are appropriate for the company's operations and risk profile. Each is financially sound and writes within its area of expertise, and the mix of strong admitted markets with construction-focused surplus lines carriers is exactly what a contractor of this size and profile should expect. The issues identified in this program aren't carrier-selection problems, they're a matter of form and appetite restrictions within otherwise strong carriers, coordination challenges across a multi-carrier structure, and a handful of missing lines that no current carrier has been asked to write. Two items are worth carrier-level attention going forward: verifying financial strength ratings for the smaller specialty excess markets at each renewal and remarketing the excess auto if the current carrier won't amend its form.

If You Identify Changes That Should Be Made, Which Should Be Prioritized First and Why?

Priority 1 — Immediate Action (Bind Within 30 Days)

These items represent uninsured or critically under-insured exposures that could result in uncovered losses today.

Add Employment Practices Liability Insurance

This is the largest total coverage void in the program. Every GL and excess policy excludes EPL claims, and no standalone policy exists to fill that gap. With the current workforce and payroll, the company has zero coverage for the most common types of employer claims, including wrongful termination, discrimination, harassment, and retaliation. Unlike other gaps in the program where partial coverage exists, this is a line with no policy anywhere that would respond.

Recommended structure: bind standalone EPLI with minimum \$1,000,000 limits, set the retroactive date back to the company's first date of employment, name all related entities as insureds, and include third-party EPL coverage for discrimination claims brought by subcontractors or vendors.

Restructure excess auto to Align with Primary Auto

The excess auto policy is the most structurally misaligned coverage in the program. The primary policy covers any auto, including hired and non-owned vehicles, at \$1M, while the umbrella excludes hired and non-owned autos and subcontractor operations entirely and schedules one fewer vehicle than the primary. For a construction company where employees regularly drive personal vehicles to job sites, this is the highest-frequency auto exposure without excess protection above \$1M.

Recommended action: remove the hired and non-owned exclusion.

Increase Cyber Liability to Functional Limits

The current \$50,000 aggregate with \$5,000 sublimits is not meaningful coverage, and cyber is excluded on every other policy in the program. Given the company's payment processing, employee data, and use of cloud-based project management tools, a single wire fraud incident or ransomware event would exceed these limits many times over.

Recommended structure: bind a standalone cyber policy with minimum \$1,000,000 limits, including social engineering and fraudulent instruction coverage, ransomware and extortion, business interruption from system failure, regulatory defense, and breach response costs.

Priority 2 — Near-Term (Address Within 60 Days)

Harmonize Named Insureds Across All Policies

Related entities are currently named on the package policy but appear on no other line of coverage. If these entities are active and conducting operations, a liability claim against either one would likely be denied. We recommend confirming with the company whether these entities are active, and if so, adding them as named insureds across every applicable policy in the program.

Add Other States Coverage to Workers' Compensation

The policy currently provides no coverage outside Colorado. Contractors frequently cross state lines for material sourcing, supplier meetings, or project opportunities, and an injury in another state would currently have no coverage. We recommend adding an all-states endorsement and confirming employee travel patterns to identify which states are most relevant.

Increase Crime Limits

Current employee theft and funds transfer fraud limits are inadequate for a contractor managing projects of this size. We recommend increasing both to a minimum of \$100,000 and considering social engineering coverage if it isn't already addressed through the upgraded cyber policy.

Priority 3 — Medium-Term (Address at Next Renewal)

Add Directors and Officers Liability

No management liability coverage currently exists. With multiple legal entities in the company's structure, directors and officers face personal exposure for management decisions, regulatory actions, and contract disputes that general liability simply doesn't

cover. We recommend a minimum \$1,000,000 policy and would suggest considering a combined management liability package with EPLI to streamline both placements.

Evaluate Practice Professional Liability

We did not identify any Professional liability in the documents provides except for one project. If the company provides design-build, construction management, scheduling, or value engineering services on any other project, there is no coverage for those services. We recommend confirming the scope of professional services performed company-wide and binding practice-level coverage if warranted.

Address the Wildfire Exclusion

Both the practice GL and excess GL currently exclude wildfire, a meaningful gap for a Colorado contractor given the state's wildfire risk and the hot work, equipment, and materials involved in typical job sites. We recommend requesting removal or a buyback of this exclusion at the next renewal.

Resolve the Workers' Comp and Excess Policy Period Misalignment

A roughly ten-day gap currently exists between the workers' comp policy period and the GL/excess policy periods. We recommend updating the excess policy's reference to the correct underlying policy number and aligning effective dates at the next renewal cycle.

Priority 4 — Monitor and Verify

Item	Action
Contractors' equipment (owned vs. rented)	Confirm whether the company owns equipment; if so, schedule it on an inland marine form
Property coverage adequacy	Verify current limits against an updated inventory to avoid a coinsurance penalty
Pollution policy overlap	Confirm whether the practice and project-specific pollution policies are coordinated to avoid gaps or redundancy
Business income adequacy	Verify reported values align with projected 12-month operations

Implementation Summary

Priority	Item	Timeline	Why This Order
1	EPLI	Bind within 30 days	Total coverage void; high-frequency employer exposure
1	Restructure excess auto	Bind within 30 days	Structural misalignment on the highest-frequency auto exposure
1	Cyber — increase to \$1M+	Bind within 30 days	Current limits are nominal; every other policy excludes cyber
2	Named insured harmonization	Within 60 days	Potential claim denial across multiple lines of coverage
2	Workers' comp other states	Within 60 days	Any out-of-state injury is currently uninsured
2	Crime limits increase	Within 60 days	Current limits inadequate for project values managed
3	D&O	Next renewal	Multi-entity structure creates management liability exposure
3	Practice professional liability	Next renewal	Depends on scope of professional services performed
3	Wildfire exclusion negotiation	Next renewal	Colorado-specific risk worth negotiating
3	Policy period alignment	Next renewal	Administrative fix; low probability of loss in the gap window

Additional Coverages Recommendation

The following recommendations are organized by urgency and tailored to a custom home builder specializing in framing and ground-up construction in Colorado.

Tier 1 — Essential (No Current Coverage Exists)

Employment Practices Liability

Construction is among the highest-risk industries for EPL claims, given the volume of hiring, firing, and field crew management involved. Colorado's Anti-Discrimination Act allows for both compensatory and punitive damages, and a single wrongful termination or harassment claim can easily run \$150,000 to \$500,000 in defense and indemnity costs.

Recommended structure: \$1,000,000 each claim/aggregate, retroactive date back to the earliest date of employment, third-party EPL coverage for claims from subcontractors or vendors, a wage and hour defense sublimit of at least \$100,000, and all related entities named as insureds. This can often be packaged with D&O as a combined management liability policy at better pricing than two standalone placements.

Directors and Officers Liability

With multiple legal entities in the company's structure, directors and officers face personal liability for management decisions, contract disputes, creditor claims, and regulatory investigations, none of which general liability responds to.

Recommended structure: \$1,000,000 each claim/aggregate, Side A coverage for individual directors and officers, Side B entity reimbursement, and regulatory investigation coverage for agencies like OSHA, EPA, or DOL. Side C coverage isn't necessary unless the company has outside investors.

Standalone Cyber Liability

The company maintains employee personal information, processes vendor and subcontractor payments, and likely relies on cloud-based project management and accounting systems. Vendor payment diversion schemes are a fast-growing threat in construction specifically, and the current sublimits wouldn't cover a single redirected payment.

Recommended structure: \$1,000,000 each event/aggregate, a social engineering and fraudulent instruction sublimit of at least \$250,000 with verification procedures, full limits for ransomware and cyber extortion, business interruption coverage for system failure, regulatory defense for state privacy law compliance, and breach response costs.

Tier 2 — Strongly Recommended (Partial or Project-Limited Coverage Exists)

Practice Contractors Professional Liability

Professional liability currently exists only for one project. Even without traditional design services, courts increasingly treat construction management, scheduling, budgeting, and means-and-methods decisions as professional services, and construction defect litigation frequently includes professional negligence theories.

Recommended structure: \$1,000,000 each claim/\$2,000,000 aggregate, claims-made form with a retroactive date matching the earliest professional services performed, a broad definition of covered services, and rectification cost coverage for correcting defective work discovered before a formal claim.

Hired and Non-Owned Auto Excess

If the umbrella carrier won't remove the hired and non-owned exclusion, a standalone excess policy for that exposure should be considered. Employees driving personal vehicles to job sites is a daily occurrence, not an edge case, and a serious accident could easily produce a judgment above the primary limit.

Recommended structure: \$1,000,000 or higher, sitting above the primary auto policy, covering hired and non-owned autos specifically. The preferred alternative remains remarketing the entire excess auto policy to a carrier willing to write broader coverage without this exclusion.

Excess Coverage for Subcontractor Auto Operations

As a prime contractor, the company is routinely named in claims arising from subcontractor vehicle operations. Contractual risk transfer through certificate requirements is the first line of defense, but subcontractors may still be underinsured.

Tier 3 — Consider Based on Operations Verification

Contractor's Equipment/Tools Floater

If the company owns generators, compressors, scaffolding, or other equipment beyond the modest tools sublimit already in place, an inventory should be conducted and owned equipment scheduled on an inland marine form with a low deductible.

Builder's Risk

Builder's risk is often provided by the project owner on larger projects, but this should be confirmed for every active and upcoming project. If the company ever builds on spec or takes on projects without owner-provided coverage, an annual builder's risk policy would be more efficient than placing it project by project.

Fiduciary Liability

If the company sponsors retirement or health benefit plans, the fiduciaries of those plans carry personal liability under ERISA for mismanagement. This is often a low-cost addition when packaged with EPLI and D&O.

True Commercial Umbrella

The current excess structure follows form over the practice GL, meaning every exclusion on the underlying policy (residential construction, wildfire, height work) also applies to the excess layer. At the next renewal, it's worth evaluating whether a true umbrella with independent coverage grants would eliminate this drop-down gap, understanding that true umbrellas are typically harder to place and more expensive than follow-form excess.

Summary Matrix

Coverage	Priority	Estimated Limit	Rationale
EPLI	Tier 1	\$1M/\$1M	Total void; high-frequency exposure
D&O	Tier 1	\$1M/\$1M	Multi-entity structure; no management liability
Standalone Cyber	Tier 1	\$1M/\$1M	Current limits are nominal
Practice Professional Liability	Tier 2	\$1M/\$2M	Coverage exists only for one project
Hired & Non-Owned Excess Auto	Tier 2	\$1M+	Gap on excess hired and non-owned auto liability
Subcontractor Auto Excess	Tier 2	Remarket preferred	Current exclusion on subcontractor operations
Contractors Equipment	Tier 3	Based on inventory	Current coverage limited to leased/rented items
Builder's Risk	Tier 3	Project-dependent	Confirm owner-provided coverage on all projects
Fiduciary Liability	Tier 3	\$1M	Only if benefit plans are sponsored
True Umbrella	Tier 3	\$5M+	Addresses follow drop-down gaps

Contract Review & Risk Transfer

Which Carrier Markets Would You Target for Our Program and Why? Where Do You Expect to Find the Best Terms, Appetite, or Specialization?

CCIG's market strategy for this program reflects current conditions in the construction insurance marketplace, which continue to bifurcate sharply by project type. Commercial construction broadly sees ample capacity and competitive pricing for clean, well-managed accounts, and admitted regional markets remain a strong fit for the company's non-residential general liability, auto, and package coverage. For-sale residential and multifamily construction in states with active construction defect litigation, including Colorado, continues to see more limited appetite and firmer pricing industry-wide, which means project-specific GL towers and excess layers for residential and multifamily work will likely continue to be placed with specialty and excess/surplus lines markets rather than admitted carriers. This mirrors the structure already in place in the current program, where project-specific towers rely on specialty markets while the core practice policies sit with admitted carriers.

Given this, CCIG's approach is to place each line of coverage with the market best suited to it, rather than defaulting the entire program to a single carrier type:

- **Core package, practice GL, and casualty:** CCIG would target Berkley, EMC, Selective, Amerisure, and Hanover for this program. Each of these carriers maintains a dedicated construction and contractor practice with underwriters who understand framing, multifamily, and general contractor risk specifically, rather than treating construction as a generalist commercial line. Between them, CCIG has access to differing risk appetites and pricing philosophies, which allows for genuine competitive marketing rather than a single-market placement. That is not to say that wouldn't utilize excess lines if they provide better coverage.
- **Workers' compensation:** Pinnacol Assurance, given its position as Colorado's largest workers' compensation carrier and the state's designated market of last resort, with unmatched Colorado-specific claims handling and safety resources. Given Schneider Building Companies MOD we also recommend Pinnacol because of how well you are doing in comparison to your peers.
- **Excess/umbrella layers:** Berkley, EMC, and Hanover would also be approached for excess capacity, allowing CCIG to keep the excess tower coordinated with the underlying primary carrier where possible and reduce the follow-form and coverage-alignment issues that come with a fragmented multi-carrier structure.

This structure keeps pricing and terms competitive on the lines where admitted capacity is genuinely available, while making sure the harder-to-place residential and multifamily exposures still land with carriers built to write them.

Would You Expect to Be Able to Offer Premium Savings or Improved Structure on Our Current Program? If So, Where?

CCIG is confident in its ability to improve the structure of this program, even before final premium benchmarking is complete. The clearest opportunity is the excess auto policy: it currently excludes hired and non-owned autos and subcontractor operations, meaning premium is being paid for excess protection that doesn't reach the company's highest-frequency exposures. Remarketing or restructuring this line is likely to improve the value received for comparable spend.

There's also a structural question around the excess GL/EL tower relative to the practice GL's residential construction exclusion. Since a meaningful share of actual operations fall outside what the underlying policy covers, there may be room to right-size that excess limit and reallocate spend toward the program's more pressing gaps, like EPLI and cyber, rather than carrying excess capacity that sits atop a restricted primary.

On new coverage, EPLI, cyber, and D&O would represent additional premium rather than savings, since none currently exist in the program. That said, packaging EPLI and D&O as a management liability policy, and replacing the nominal cyber endorsement with a standalone policy, both tend to be more cost-efficient than adding these lines individually.

A specific savings estimate requires benchmarking against the company's actual current premiums and terms, which CCIG would complete as part of the full marketing process. What we can commit to now is that the review has already identified concrete structural opportunities to convert into measurable value once that benchmarking is done.

Please provide examples of how you improved another contractor's program in terms of cost, coverage, structure, or risk transfer.

CLIENT SNAPSHOT

A Front Range-based contractor specializing in lawn care, landscaping, and hardscaping services. The company employed approximately 150 seasonal and full-time workers and generated roughly \$15 million in annual revenue.

THE CHALLENGE

Like many contractors operating in physically demanding environments, the company faced ongoing workers' compensation challenges stemming from a higher volume of frequent, lower-severity injury claims.

While most claims were relatively small, often under \$5,000, the volume of incidents created significant downstream financial consequences. At the time, the company carried a low deductible workers' compensation structure, meaning nearly every claim contributed to rising future insurance costs.

Over time, their experience modification rate (E-Mod) climbed to 1.52, driving annual workers' compensation premiums to nearly \$150,000. Analysis showed the company was effectively paying nearly \$1.81 in future premium impact for every \$1 spent on claims over a three-year period. In addition to rising premiums, the elevated E-Mod increased the company's overall total cost of risk and negatively impacted long-term business value.

WHAT CCIG DID

CCIG conducted a comprehensive workers' compensation and total cost of risk analysis to identify where the company was overspending and where strategic adjustments could create long-term savings. CCIG's broader strategy centered on restructuring the workers' compensation deductible program. The company moved from a minimal deductible structure to the maximum allowable deductible.

Because most claims were relatively small, CCIG demonstrated that absorbing more claim costs directly would ultimately be far less expensive than continuing to allow those claims to inflate future premiums through the E-Mod calculation.

In addition to the deductible restructuring, CCIG implemented targeted loss control initiatives and employee safety training focused on reducing preventable injuries among seasonal workers.

THE RESULT

Within approximately three years, the contractor's workers' compensation experience modification rate dropped from 1.52 to 0.65, effectively reaching the minimum possible E-Mod.

Annual workers' compensation premiums decreased from nearly \$150,000 down to roughly \$65,000 annually, reducing costs by more than 50%.

The deductible restructuring alone was projected to save the company approximately \$80,000 over a three-year period. Even after accounting for increased deductible participation, the company generated substantial net savings through reduced premiums, improved E-Mod performance, and dividend returns tied to loss performance.

Key Outcomes Included:

- Workers' compensation premiums reduced by more than half
- MOD improvement from 1.52 to 0.65
- Approximately \$65,000 in upfront premium savings
- Roughly \$39,000 in annual savings tied to MOD improvement

Beyond the direct insurance savings, the improved loss profile strengthened the company's financial position and positively affected its business valuation.

Benchmarking Data

Industry peer benchmarking offers valuable insights when comparing a company's insurance coverage and rates against those of their peers. By leveraging this data, clients gain a clear understanding of how their program stacks up within their industry, identifying areas where they might be overpaying or underinsured. CCIG provides this information to help our clients make informed decisions, optimize their coverage, and ensure they receive competitive rates aligned with industry standards.

Helping clients understand the true cost of claims, e-mod adjustments, & acquisitions.

At CCIG, we conduct a comprehensive Workers' Comp deductible analysis to help our clients find the optimal balance between cost and coverage. By analyzing various deductible options, we identify opportunities to reduce premiums without compromising protection. This process enables our clients to make informed decisions that align with their financial goals, further showcasing our dedication to their long-term success and financial well-being.

Coverage & Carrier Review

- **Coverage Evaluation** - We thoroughly assess each aspect of your insurance program, identifying gaps, overlaps, and opportunities for improvement.
- **Carrier Performance Review** - We also evaluate the performance of your current insurance carriers, ensuring they deliver competitive terms and align with your risk profile.
- **Clear, Actionable Results** - Based on our findings, we apply a rating to each line of coverage and carrier, giving you a clear overview of where improvements can be made.

Subcontract and Subcontract Risk Transfer

Will You Review Subcontractor Insurance Documents for Us? If So, Describe Your Process, Standards, and Turnaround Times.

Yes. CCIG reviews subcontractor insurance documents to confirm they comply with the insurance requirements set out in the contract. Our process checks each subcontractor's certificate against the specific limits, additional insured status, waiver of subrogation, and primary/noncontributory language required by the contract, flagging any gaps or discrepancies for follow-up before the subcontractor is cleared to begin work. Our standard turnaround time on these reviews is 24 hours or less.

Could Your Team Replace or Reduce the Need for Our Current Third-Party Subcontractor Compliance Solution?

No. CCIG's review process confirms whether a subcontractor's insurance meets contract requirements at a point in time, but we are not set up to provide ongoing compliance tracking, such as monitoring policy expiration dates or flagging upcoming renewals across a full subcontractor roster. That kind of continuous tracking is best handled by a dedicated third-party compliance platform. We typically recommend clients work with a service like Paladin, SambaSafety, or a similar compliance company to manage that piece, while CCIG focuses on the insurance review itself.

Do Our Current Subcontract Insurance Requirements Align with Our Current Insurance Program and Intended Risk Transfer Strategy?

Partially. The subcontract requirements show real risk transfer sophistication in some areas such as the MSA's required \$1M/\$2M/\$2M subcontractor GL limits with additional insured and primary/noncontributory status, backed by a deductible penalty for noncompliance, mirror the risk transfer approach already built into the company's own GL policies. It thus reveals misalignments with the company's own program in others.

Where Misalignment Exists

Several gaps in the subcontract requirements don't match the standard the company holds itself to in its own program:

- **Excess auto limits are inconsistent.** The MSA requires only \$1,000,000 in umbrella/excess from subcontractors, while the company's own Wheat Ridge tower carries \$11M in stacked GL limits. For residential and multifamily exposure specifically, \$1M in subcontractor excess is materially lower than the risk transfer the company would want in place if a subcontractor's work causes a significant loss.
- **Completed operations duration may not match.** The MSA requires subcontractors to maintain completed operations coverage for 3 years occurrence / 8 years claims-made, while the company's own Wheat Ridge GL carries a 10-year completed operations extension (or statute of repose, whichever is less). If a subcontractor's completed operations coverage lapses before the company's own exposure period ends, the company could be left without recourse against the subcontractor's insurance for claims arising late in the repose period.
- **The Purchase Agreement is materially weaker than the MSA.** Material vendors under the Purchase Agreement are only required to carry workers' compensation, general liability, and auto, with no umbrella, completed operations, or professional liability requirement at all. For vendors performing site work, this creates a real risk transfer gap relative to what the company requires of subcontractors under the MSA.
- **Waiver of subrogation isn't fully carried through.** The MSA broadly waives subrogation, but doesn't explicitly require subcontractors' GL, auto, and umbrella policies to be endorsed with a waiver running to the company, meaning the contractual commitment and the actual insurance requirement aren't fully connected.
- **The indemnity language in the Purchase Agreement likely exceeds what Colorado law allows.** It currently reaches the company's own concurrent negligence, which Colorado's anti-indemnity statute (C.R.S. 13-21-111.5) would likely void in part, meaning the risk transfer intended by that clause may not actually hold up.

Bottom Line

The company's subcontract requirements reflect a solid starting framework, but the gaps between the MSA and Purchase Agreement, the excess auto and completed operations mismatches relative to the company's own program, and the enforceability issue in the indemnity language mean the intended risk transfer strategy isn't fully achieved as currently written. Consolidating both documents onto a single insurance exhibit and aligning the limits and durations with the company's own program would close the most significant gaps.

Brokerage Service Model & Team Structure

Service Approach

The Team

Cody Knepper

Insurance Advisor

Cody.knepper@thinkccig.com

(720) 912-7190

Role: Cody is the strategic advisor overseeing the strategy, vision, and implementation of your insurance plan. He is also your go-to contact for any immediate escalations that may arise.

Kelli Ducey

Client Service Team Lead (Construction Practice) / Client Executive

Kelli.ducey@thinkccig.com

(720) 912-7190--

Role: Serves as the lead point of accountability for the account, driving process improvement while managing carrier marketing and negotiations from start to finish. Sets overall strategy across carrier selection, coverage design, analytics, and exposure management to keep the program aligned with the client's goals.

***Roxy Ghulamhussain*****Client Manager**

Roxy.ghulamhussain@thinkccig.com

(720) 912-7190--

Role: Manages the day-to-day marketing of renewal and new business, handling contract reviews and coverage questions as they arise. Coordinates client documentation and provides audit analysis and dispute support to keep the account running smoothly.

***Francesca Barrett*****Associate Client Manager**

Francesca.barrett@thinkccig.com

(720) 912-7190--

Role: Handles the day-to-day servicing of the account, issuing proof of insurance and processing endorsements and policy changes as they come up. Manages premium audits, policy checking, billing and accounting, and oversees cancellations and notices of cancellation.

***Gail Justice*****Claims Advocate**

Gail.justice@thinkccig.com

(720) 330-7938

Role: Receives, logs, and coordinates all inbound claims with carriers, then advocates for the client through to resolution with coverage review and litigation support along the way. Keeps the client informed with loss run analysis, claims reporting, and ongoing status updates throughout the life of each claim.

***Gary Glader*****Safety Leader**

Gail.justice@thinkccig.com

(720) 330-7938

Role: Conducts risk assessments and OSHA compliance reviews, then develops and delivers safety training and loss control strategies tailored to the account. Supports pre-renewal safety reviews and helps build underwriting narratives that position the account favorably with carriers.

What Is Your Typical Turnaround Time for Certificates, Policy Changes, and Loss Runs?

Certificates of insurance are turned around on the same day or within 24 hours through CSR24. Requests received after 3:00 PM MST are completed the following business day.

Policy changes are handled based on priority, with our internal turnaround target set at 72 hours. That said, the actual endorsement issuance timeline depends on the carrier, and can take up to 30 days to receive the finalized change endorsement back from some markets.

Loss runs don't follow a single fixed turnaround, since timing depends heavily on the carrier. For standard admitted markets, we typically turn these around within 24 hours.

What Technology Platforms Do You Use to Manage Certificates, Policy Documentation, Renewal Workflows, and Subcontractor Compliance?

CCIG manages this account on Applied Epic, our agency management system, which serves as the central system of record for policy documentation and renewal workflow tracking. Certificates of insurance are issued through CSR24, giving the client fast, self-service access to COIs as needed. Renewal information gathering runs through Indio, which streamlines the collection of updated exposure and application data ahead of each renewal. Policy documents and client-facing files are stored and shared through OneDrive.

For subcontractor compliance, we currently partner with Paladin to track subcontractor insurance expiration dates and ongoing contract compliance. CCIG is also in the process of rolling out an AI-driven subcontractor compliance capability internally, though it is not yet available for client use.

We also use SambaSafety for driver and fleet risk monitoring, and reference NCCI data as part of our workers' compensation experience modification analysis and benchmarking. Safety training runs through our online training platform.

Claims Advocacy

Please Describe Your Claims Team Structure and the Claims Process from First Notice Through Resolution

CCIG's claims advocacy model is built around three core functions working in sequence. First notice of loss triggers immediate intake and carrier coordination, including reserve tracking and ongoing carrier communication to keep the file moving. From there, the dedicated Claims Advocate manages the file actively through resolution, providing coverage review, negotiation support, and litigation management where applicable. Throughout the process, the client receives loss run analysis, regular status updates, and claims reporting, so there's always visibility into where a claim stands and what's being done to move it forward.

Who on Your Team Owns Claim Advocacy, and Who Would We Work with During Active Claims?

Gail Justice, the Claims Advocate on the proposed service team, owns this function directly. She receives logs, and coordinates all inbound claims with carriers, advocates for the client through to resolution with coverage review and litigation support along the way, and keeps the client informed with loss run analysis, claims reporting, and status updates for the life of each claim. Gail would be your primary point of contact for any active claim on the account.

What Experience Does Your Brokerage Have with Construction Defect Claims in Colorado and Other Claims Issues Relevant to Contractors Like Us?

CCIG's Claims Advocacy team brings more than 10 years of experience managing construction defect claims across Colorado and numerous other states. Our expertise helps clients navigate complex claims, understand evolving legal requirements, and make informed risk management decisions. Key areas where we provide value include:

Construction Defect Reform Guidance

Colorado's construction defect laws have recently changed in ways that directly impact underwriting, coverage strategy, and risk discussions with builders and developers. While the Colorado Construction Defect Action Reform Act (CDARA) continues to govern most claims, the 2025 reforms introduced an optional framework for multifamily projects that can reduce claim exposure and litigation costs in exchange for enhanced quality assurance and disclosure requirements. We help clients evaluate, on a project-by-project basis, whether opting into this framework aligns with their business objectives and risk tolerance.

Claim Response and Process Management

We advise clients to establish and maintain a documented internal process for responding promptly to notices of claims. Early identification, investigation, and reporting can help preserve coverage, strengthen defenses, and improve claim outcomes.

Coverage Analysis and Education

We help clients understand the critical distinction between defective workmanship and resulting property damage. Standard commercial general liability and property policies generally exclude the cost of repairing or replacing the defective work itself, but resulting damage caused by that defective work may still be covered. Because this distinction is at the heart of many construction defect coverage disputes, we believe it's essential to educate clients on these issues before a claim occurs rather than after coverage questions arise.

Statute of Repose and Long-Term Exposure

Our team has extensive experience advising clients on Colorado's statute of repose and its impact on claim exposure and insurance coverage. Understanding when the statute of repose applies, and how certain circumstances may extend the applicable time period, is critical, particularly when defects are discovered years after project completion. We proactively counsel clients on these issues so they fully understand their potential exposure and can make informed decisions when addressing late-discovered construction defects.

By combining construction defect expertise, coverage knowledge, and claims advocacy experience, CCIG helps clients proactively manage risk, make informed business decisions, and navigate complex construction-related claims with confidence.

Owner Contract Review

What Changes Would You Suggest to the Insurance Exhibit or Insurance Provisions in Our Owner/Prime Contract?

Based on CCIG's broader review of the company's contract documents, several recurring issues stand out that we would expect to find, and would specifically look to correct, in the owner/prime contract's insurance exhibit:

Additional Insured Form Specificity

Rather than accepting a general additional insured requirement, the exhibit should specify exact ISO form numbers and require both ongoing and completed operations coverage together, since an ongoing-operations-only endorsement leaves a meaningful gap for construction defect claims that surface after project completion.

Umbrella/Excess Limits

Given the residential and multifamily exposure involved, we would recommend the exhibit require umbrella/excess limits scaled appropriately to project size and hazard, with the umbrella following form over general liability, auto, and employer's liability, and carrying the same additional insured and primary/noncontributory status as the underlying general liability policy.

Waiver of Subrogation Scope

We would confirm the exhibit requires a waiver of subrogation endorsement running to the owner across all liability policies, not just workers' compensation, since a waiver commitment that isn't reflected in the insurance procurement requirements creates a gap between what's promised and what's insured.

Notice of Cancellation

The exhibit should require advance written notice of cancellation, non-renewal, or material reduction in coverage, since certificates alone no longer obligate carriers to notify certificate holders directly.

Carrier Financial Strength Requirements

We would recommend the exhibit specify a minimum A.M. Best rating (typically A- VII or better) and require carriers to be authorized to do business in Colorado, protecting against coverage placed with financially weak or non-admitted markets.

Completed Operations Duration

The exhibit's completed operations maintenance period should be aligned with Colorado's construction defect statute of repose, which can extend well beyond the shorter maintenance periods sometimes specified by default, to avoid a lapse in coverage while liability exposure remains open.

Indemnity Language and Colorado's Anti-Indemnity Statute

This is the most significant enforceability issue to watch for. Colorado's anti-indemnity statute (C.R.S. 13-21-111.5) voids indemnity provisions to the extent they require one party to indemnify another for that party's own negligence. If the owner contract's indemnity language reaches beyond comparative fault, that provision is likely unenforceable in part, and we would recommend revising it to a comparative-fault standard that indemnifies only to the extent of the indemnifying party's own negligence, while expressly tying that indemnity obligation to the insurance requirements so the duty to defend is actually insured rather than purely contractual.

Exclusions to Reject

Consistent with the approach already used in the company's other contract templates, we would recommend the owner contract insurance exhibit expressly reject residential, for-sale, and EIFS exclusions, along with subsidence/earth movement, habitational, and prior-work exclusions that would otherwise undercut completed operations coverage.

Compensation & Fee/Commission Disclosure

How Does Your Compensation Work on Our Program? Please Disclose Commissions, Fees, Contingents, and Any Other Compensation Related to Placement or Service

CCIG is fully compensated through standard commissions paid by the placing carriers. CCIG does not receive contingent commissions on this program. In select cases, we may also charge a fee for added-value services beyond standard placement and servicing, such as loss control support, claims advocacy, or other administrative services, and we would disclose and discuss any such fee with the client in advance before it applies.

Please Provide a Copy of Your Broker Service Agreement Form

CCIG's compensation on this account is based on standard commission from the placing carriers rather than a client-paid fee arrangement, so a broker service/fee agreement does not apply in this case. In place of a fee agreement, CCIG would provide a standard Broker of Record letter for the client's signature to formalize the agency relationship, along with our standard agency agreement outlining the scope of services provided.

Implementation & Transition Plan

At CCIG, our 365-day service model provides continuous, proactive support year-round. Unlike traditional check-ins, we stay consistently engaged, monitoring evolving needs, addressing emerging risks, and optimizing your insurance program in real-time.

120 DAYS PRIOR TO RENEWAL	90 DAYS PRIOR TO RENEWAL	60 DAYS PRIOR TO RENEWAL	30 DAYS PRIOR TO RENEWAL
ANALYZE PROGRAM PERFORMANCE	CONDUCT ASSESSMENTS	SET KEY PERFORMANCE INDICATORS	PREPARE ACTION PLAN
Gather existing client data on rates, exposures and losses: • 5-year summary • Trend losses • EMR history • Review reserves & payouts	On-site assessments of business practices. Measure via scorecard: • Risk tolerance & budget • Safety & loss control • Third-party risks • Contractual risk transfer	How should we measure success in the program moving forward? • Determine indicator(s) • Re-run analysis using KPIs • Recommend areas of focus • Define action & reporting plan	Build customized service plan for client program: • Set goals from assessments • Itemize services & timelines • Leverage predictive modeling • Deliver on promises
Discuss observations and potential to improve positioning.	Provide risk assessment results and go-forward recommendations.	Determine investments in support of achieving lowest total premium.	An outline of our commitment to ensure results.
ONGOING			
ANNUAL SERVICE & STEWARDSHIP PLAN			
Provide reporting on action plan: • Capture services performed & outcomes delivered • Educate on the insurance market & economics affecting premiums • Highlight achievements, opportunities & potential impact on premiums		Shift to a philosophy of managing total cost of risk: • Data-driven decision making • Transfer, mitigate, & prevent risk • Explore alternative risk financing options	
Ensuring service satisfaction and continued program optimization.			

The 120/90/60/30-day sequence above reflects CCIG's ideal transition timeline, but we regularly compress this process when a client needs to move faster, without skipping the core work. In a shortened timeline, the first three phases (analyzing program performance, conducting assessments, and setting KPIs) are condensed and run in parallel rather than sequentially, so we're gathering loss and exposure data, conducting the risk assessment, and defining success metrics at the same time rather than waiting on each phase to finish before starting the next. The action plan phase stays largely intact, since that's where the client actually sees a customized service plan, itemized timelines, and our specific commitments, and we don't shortcut that step regardless of how compressed the front end gets.

What this means in practice: a full 120-day runway lets us be more thorough and strategic in the assessment phase, while a shorter runway, say 45 to 60 days, still allows us to deliver a complete transition, but with faster turnaround on data-gathering and a tighter window between assessment and go-forward recommendations. Once the transition is complete, the account moves into the same ongoing 365-day service and stewardship model regardless of how compressed the initial timeline was.
